INFIGEN WELCOMES PASSAGE OF THE RET LEGISLATION THROUGH THE SENATE

Infigen Energy, Australia's largest wind farm owner, today welcomed the passage of the Renewable Energy Target (RET) legislation through the Senate.

Infigen Energy Managing Director, Miles George, said, "the passage of the legislation, which will require electricity retailers and other large electricity buyers to obtain 20 per cent of their electricity from renewable energy generators by 2020, provided certainty and a significant boost for renewable energy investment, and particularly for wind energy which is by far the most cost competitive renewable energy technology".

"The expanded RET target is more than four times the size of the previous target requiring a steady increase in the uptake of emission free renewable energy to reach 45,000 gigawatt hours by 2020. We anticipate that around 800MW of additional renewable energy capacity could be built each year, which is sufficient to provide the energy needs of over 450,000 typical Australian homes," he said.

"Infigen Energy has a high quality project development pipeline in Australia, with key projects across six states which will deliver up to 1650 MW of new capacity. This development pipeline will enable Infigen to continue its growth and market leading position in Australia," he said.

"The Senate vote underpins the future of the Australian renewable energy industry and has the potential to create tens of thousands of jobs and encourage major regional investments in wind energy and other renewable energy generation in Australia".
